

KAT.TAL.322 Advanced Course in Labour Economics

Nurfatima Jandarova, Pinni A3077 nurfatima.jandarova@tuni.fi

The course covers a range of traditional and contemporary topics in Labour Economics with an emphasis on applied microeconomic theory and empirical analysis. In particular, the course starts by introducing the traditional models of labour supply, labour demand and human capital investments. With the basics covered, we will dive deeper into topics high on public and research agenda such as technological shift, discrimination, education inequality and intergenerational mobility. The aim is to give students an up to date knowledge of labour economics and, for those who wish to undertake graduate research in the area, to encourage the development of independent research interests.

Course structure

There are eight 90 min lectures twice a week in period IV (14-16 on Wednesdays and Thursdays). Check classroom on Sisu calendar.

Course requirements

Short presentation (20-25 min) of a research proposal on a topic of own choice related to the course. The proposal should include a clear research question, contribution to the existing literature, prospective dataset and detailed discussion of research design (empirical strategy, challenges and ways of overcoming them). Students may choose to do the proposal individually or in groups of 2-3 students.

You can find guidelines for research proposals [here](#).

General reading

There is no single textbook required for this course. The following books contain general information about the topics covered in the course. Knowledge of econometric methods at the level of *Mostly Harmless Econometrics* will be helpful.

Borjas, G. J. *Labor Economics*, 6th edition, international edition (New York, NY: McGraw Hill, 2013).

Cahuc, P. *Labor Economics* (Cambridge (Mass.): MIT Press, 2004).
